

Principal Adverse Impact Statement

Statement on principal adverse impacts of investment decisions on sustainability factors

Pursuant to Article 4 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector (Disclosure Regulation or SFDR).

Principal Adverse Impacts (PAIs) on sustainability factors are any negative effects that investment decisions or advice could have on environmental, social and employee matters, human rights, anti-corruption and anti-bribery matters.

1. Summary

ERIC Fund Management GmbH (the “**Fund Manager**”, “**We**”) (LEI: 391200YQUH0SXNKOEJ32) considers principal adverse impacts of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of the Fund Manager.

This statement on principal adverse impacts on sustainability factors covers the reference period from 1st of January 2024 to 31 December 2024.

We applied a set of sustainability indicators at portfolio company level subject to data availability and data quality. This contains the mandatory indicators as set forth in no. 1 to 14 of Table 1 of Annex I of the Delegated Regulation (EU) 2022/1288 (“**RTS**”) as well as the indicators no. [4] of table 2 and no. [15] of table 3 of Annex I. At all times, we applied the principle of proportionality taking due account of the strategic relevance of an investment as well as its transactional context.

In general, our portfolio companies did not have a significant negative impact. The portfolio companies held in 2024 are nearly all early-stage startups that only have a minor operative footprint. There are numerous software companies among them that have very low emissions per se.

In order to improve the data generation, we continue to partner with APIDAY to provide support in generating the data needed to portfolio companies.

Comparability between the principal adverse impacts of our investments and industry benchmarks is still challenging due to the diversity of our portfolios (asset class, nature of the instruments, sectors we invest into etc.).

We consider principal adverse impacts as part of our investment due diligence process and procedures. At entity level, we consider principal adverse impacts by measuring and monitoring the aggregated negative impact of our investments on sustainability factors. In the absence of mandatory data reporting requirements for investee companies, we are still facing challenges in identifying all principal adverse impacts of our investments.

Principal adverse impact assessment is further described in our active ownership and engagement policies and processes. Our active ownership efforts include engagement, proxy voting, attending annual general meetings and contributing to the development of industry ESG standards.

2. Description of the principal adverse impacts on sustainability factors

Our goal is to identify and analyze main ESG challenges, risks and opportunities throughout the investment cycle. PAI indicators are a way of measuring how our investments negatively impact sustainability factors. To monitor investee companies' impacts and progress plan on adverse sustainability impacts, we collect ESG indicators quarterly.

We considered the principal adverse sustainability indicators as set forth in the table below.

Indicators applicable to investments in investee companies					
Adverse sustainability indicator	Metric	Impact 2024	Impact 2023	Explanation	Actions taken
CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS					
Greenhouse gas emissions	1. GHG emissions	Scope 1 GHG emissions	8.67 tCO ₂ e	17.68 tCO ₂ e	<p>This data covers 95% of the portfolio companies within the fund.</p> <p>The Fund Manager continues to took the following measures to minimize the greenhouse gas emissions of its portfolio companies during this reporting period:</p> <ul style="list-style-type: none"> - Integration of ESG criteria into investment decisions to prioritize companies with lower greenhouse gas emissions and stronger climate change mitigation strategies - Active engagement with portfolio companies to encourage the adoption of emission reduction targets, implementation of energy efficiency measures, and transition to renewable energy sources - Dialogue with high-emitting companies to promote transparency and disclosure of greenhouse gas emissions data - Allocation of capital towards investments in companies developing and deploying low-carbon technologies, such as renewable energy, energy storage, and carbon capture and storage (CCS) solutions - Measurement and reporting of the carbon footprint of investment portfolios to track progress towards emission reduction goals. <p>For the next reporting period, the Fund Manager plans to undertake the following actions to reduce the greenhouse gas emissions of its portfolio companies:</p> <ul style="list-style-type: none"> - Integration of ESG criteria into investment decisions to prioritize companies with lower greenhouse

Indicators applicable to investments in investee companies						
Anti-corruption and anti-bribery	15. Lack of anti-corruption and anti-bribery policies	Share of investments in entities without policies on anti-corruption and anti-bribery consistent with the United Nations Convention against Corruption	53.68%	53.68%	This data covers 85% of the portfolio companies within the fund.	No actions were taken during the reporting period. No actions were planned and/or targets set for the next reporting period.

3. Description of policies to identify and prioritize principal adverse impacts on sustainability factors

We have implemented specific policies and/or strategies to identify and prioritise principal adverse impacts on sustainability factors, which were approved by January 1, 2022:

- An ESG strategy covering the investment process to mitigate adverse impacts and enhance sustainability outcomes;
- An exclusion policy that defines criteria for excluding investment that do not meet predetermined ESG standards. The policy is available [on our website](#).

Prior to any investment, we conduct a due diligence. Part of this due diligence includes checking whether the investment could have an adverse impact on sustainability factors. We identify principal adverse sustainability impacts during reporting and disclosure stage of the investment process:

- The Fund Manager employs independent third-party verifiers or assurance providers to review and validate the accuracy and reliability of ESG disclosures, thereby enhancing the credibility and trustworthiness of the reports.

The monitoring of principal adverse impacts on sustainability factors is the responsibility of the investment team in collaboration with the portfolio management team. Our approach on identifying and prioritizing principal adverse sustainability impacts relies on the following methodologies:

- Internal ESG research (e.g., analyzing employee turnover rates to evaluate labor practices);
- External ESG research (e.g., utilizing industry-specific ESG ratings from recognized agencies like MSCI or Sustainalytics);
- Stakeholder engagement (e.g., engaging with local communities to understand social impacts of operations).

Our methodologies to identify and prioritize principal adverse sustainability impacts do not currently take into account the scope, severity, occurrence, and irremediability of adverse impacts.

Information relating to any of the indicators used is primarily obtained from the portfolio companies. However, if information is not readily available, the Fund Manager will use its best efforts to obtain the information by carrying out additional research, cooperating with third party data providers or external experts or making reasonable assumptions. Thus, errors cannot be excluded completely. Yet, we will always endeavour to identify such errors or inaccuracies and to intervene as appropriate.

The potential error margin associated with the methodologies and resources used to identify and calculate principal adverse sustainability impacts includes:

- Different definitions and interpretation of materiality;
- Error from proxy data usage.

The identification and prioritization of principal adverse sustainability impacts rely on materiality, measurability, data quality and availability, using the following data sources notably:

- External providers specialized in "ESG" research;

- Internal qualitative research: insights from PT1 ESG analysts assessing ESG performance of investee companies, based on direct contacts with academics, institutions, civil society research, issuer official publications.

4. Engagement policies

We believe that engagement with investee companies sustainability issues can have a positive impact on investment results and on society.

We view engagement as a means to enter into a dialogue with a company to influence its behavior. It can be conducted either as a response to a specific incident that has had an adverse sustainability impact, or done proactively to steer companies towards the 'safe' and 'just', or 'positive' impact.

When it comes to active ownership, the Fund Manager adheres to the following engagement principles:

- Collaboration with other investors on engagement initiatives to address common ESG concerns and advocate for sustainable practices;
- Joining investor coalitions or networks focused on ESG issues;
- Participating in industry working groups or forums to get involved in discussion and initiatives aimed at addressing industry-specific ESG challenges;
- Sharing best practices and insights with peers;
- Pooling resources for research or advocacy efforts.

When there is no reduction of the principal adverse impacts over more than one reference period, then we adapt our strategy by:

- intensifying our engagement efforts with investee companies through seeking dialogue with companies and raising issues at the board level;
- seeking greater transparency regarding impact mitigation measures.

5. References to international standards

We do not currently commit to adhering to responsible business conduct codes or internationally recognized standards for due diligence and reporting, nor do we plan to do so in the very short term.

6. Historical Comparison

This is the third reporting period for the PAI statement.
